

Inventory Reduction Assessment

1. Does your company want to reduce your inventory investment?
2. Are inventories turns slower than expected?
3. Is your obsolete inventory increasing or higher than planned?
4. Is your warehouse having constant stock outs?
5. Are you having constant production program changes to meet customer requirements?

High inventory conducts your assets to become obsolete, and is an indicator that business processes have opportunity areas: **poor forecasting, low quality, inefficient production scheduling, long cycle times, inappropriate performance metrics are examples.**

It is necessary to identify different types of inventory, root causes and take actions to achieve important inventory cost reductions.
